Great honor for Beckhoff employee

Dr. Karl Weber represents German Federal Ministry in IEEE Government Engagement Program on Standards

Dr. Karl Weber was appointed as official representative of the German Federal Ministry of Economics and Energy (BMWi) to the Government Engagement Program on Standards (GEPS) of the world's largest professional association of electrical and information technology engineers IEEE (Institute of Electrical and Electronics Engineers). GEPS provides input to the IEEE Standards Association (IEEE SA) and provides a platform for governments from all over the world to access and participate in the standardization processes of the IEEE.

IEEE standards are essential tools to support modern infrastructure, innovation and international trade, protect consumers and address societal challenges and other public needs. IEEE invites policy makers to participate in IEEE GEPS to determine the direction and priorities of IEEE SA. Through GEPS, IEEE SA is expanding engagement from countries around the world, including European countries.

Dr. Karl Weber has become the first representative from the European Union to join IEEE GEPS.

Intensive exchange with international IT experts

Dr. Karl Weber has been working on fieldbus standardization since the end of the 1980s and is also involved in the international standardization organization IEC. After studying computer science and obtaining his doctorate, Dr. Karl Weber worked with Siemens

in the field of real-time communication for 25 years. In industry as well as in research and science (including Zurich University of Applied Science and Fraunhofer IOSB INA), he dedicated himself to Ethernet communication and contributed his experience to a wide range of projects. Since May 2013, Dr. Karl Weber has been working as an expert for industrial communication both for Beckhoff and in the EtherCAT Technology Group. He has also been active in IEEE for 18 years and is now a senior member of the organization. In his new function, he represents the German Federal Ministry of Economics and Energy in IEEE GEPS.

"The dialogue with the IT world is of great importance for us. IT and industry are increasingly merging. At the same time, both industries are developing at different rates. While IT is producing new variants at a rapid pace, in industry it is the technologies that have been tried and tested over many years that are the basis for further developing the reliable automation of machines and systems. It is important to me not to see IT developments as trends or hype, but to make established standards usable for automation in a sustainable and controlled manner," explains Dr. Karl Weber. His goal is to advance IT integration in automation in a meaningful way with regard to standards.

Common platform for the further development of automation

Dr. Karl Weber's representation in IEEE GEPS brings decisive advantages for both the BMWi and Beckhoff. "We are now involved in developments in IEEE standards at an early stage and receive the necessary background information. We can take this into account both in Germany's technological orientation and in our Beckhoff products and solutions. As a member of GEPS, we naturally also have a certain amount of influence and can contribute our own

ideas and the requirements of our industrial customers to IT standardization,” continues Dr. Karl Weber.

For Beckhoff, the appointment of his colleague Dr. Karl Weber as official representative of the BMWi to IEEE GEPS is a great honor and recognition. “With our colleague Dr. Karl Weber, GEPS gains a very experienced automation expert who is both committed to consistent standardization as a sustainable basis for industrial communication and has a comprehensive understanding of the concerns of government, the IT industry and automation and brings them together in a focused way,” says Hans Beckhoff, managing owner of Beckhoff Automation, with great pleasure. He continues: “The work in IEEE is very important for us as a company. We now play a central role in worldwide IEEE standardization projects and can contribute automation technology concerns. Only if we consistently exchange ideas with other companies from the IT and electrical industries can we drive technological innovations based on common standards, thus creating added value and consistency for users, i.e. also our customers, all over the world”.

In addition to Dr. Karl Weber and Hans Beckhoff, about 70 other Beckhoff employees and more than 40 Beckhoff students are members of the IEEE association.
